			ART UNIT	PAPER NUMBER
			2167	
SHORTENED STATUTORY PERIOD OF RESPONSE	MAIL DATE		DELIVERY MODE	
3 MONTHS	12/27/2006		PAPER	

Please find below and/or attached an Office communication concerning this application or proceeding.

If NO period for reply is specified above, the maximum statutory period will apply and will expire 6 MONTHS from the mailing date of this communication.

Office Action Summary	Application No.	Applicant(s)	
	10/080,945	CHANG ET AL.	
	Examiner Luke S. Wassum	Art Unit 2167	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) Responsive to communication(s) filed on 07 November 2006.
- 2a) This action is **FINAL**. 2b) This action is non-final.
- 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) Claim(s) 1 and 3-20 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) Claim(s) _____ is/are allowed.
- 6) Claim(s) 1 and 3-20 is/are rejected.
- 7) Claim(s) _____ is/are objected to.
- 8) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) The specification is objected to by the Examiner.
- 10) The drawing(s) filed on 08 November 2004 is/are: a) accepted or b) objected to by the Examiner. Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a). Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) All b) Some * c) None of:
 1. Certified copies of the priority documents have been received.
 2. Certified copies of the priority documents have been received in Application No. _____.
 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

1) <input type="checkbox"/> Notice of References Cited (PTO-892)	4) <input type="checkbox"/> Interview Summary (PTO-413)
2) <input type="checkbox"/> Notice of Draftsperson's Patent Drawing Review (PTO-948)	Paper No(s)/Mail Date. _____
3) <input type="checkbox"/> Information Disclosure Statement(s) (PTO/SB/08)	5) <input type="checkbox"/> Notice of Informal Patent Application
Paper No(s)/Mail Date _____	6) <input type="checkbox"/> Other: _____

DETAILED ACTION

Response to Amendment

1. The Applicants' amendment, filed 7 November 2006, has been received, entered into the record, and considered.
2. As a result of the amendment, claims 13, 17 and 19 have been amended. Claim 2 had been previously canceled. Claims 1 and 3-20 remain pending in the application.

The Invention

3. The claimed invention is a method of document retrieval including assigning concept labels to documents contained in a collection according to grammar rules, receiving a query, converting the query to a query concept using the grammar rules, and mapping the query concept to a concept label.

Claim Rejections - 35 USC §§ 102/103

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

7. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were

made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

8. Claims 1, 3-6, 8-10 and 13-20 are rejected under 35 U.S.C. 102(e) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over **Lin et al.** (U.S. Patent 6,675,159).

9. Regarding claim 1, **Lin et al.** teaches a computer-implemented method of retrieving information comprising:

a) performing a pre-processing stage by parsing the documents contained in a collection with a grammar in order to identify one or more concepts contained therein (see disclosure that the invention indexes collections of documents with ontology-based predicate structures, col. 6, lines 34-38; see also disclosure that predicate structures are concepts, col. 8, lines 47-51; see

also disclosure of the use of a grammar by the document ontological parser, col. 10, line 62 through col. 11, line 12; see also col. 20, lines 10-12);

- b) assigning concept labels to the documents contained in the collection based on the identified concepts (see disclosure that the invention indexes collections of documents with ontology-based predicate structures, col. 6, lines 34-38; see also disclosure that predicate structures are concepts, col. 8, lines 47-51; see also col. 20, lines 10-12);

- c) performing a post-processing stage by applying the grammar to a query to convert the query to a query concept (see disclosure of the use of a grammar by the query ontological parser, col. 9, line 48 through col. 10, line 7; note that although the reference discloses that the query parser is optimized for parsing user queries [col. 9, lines 52-53] and that the document parser is similarly optimized for the grammatical structure of documents [col. 11, lines 1-2 and 5-8], the characterization of these features as 'optimizations' renders inherent or alternately obvious a non-optimized embodiment that uses the same grammar for both document and query parsing as claimed; see MPEP § 2123:

“The use of patents as references is not limited to what the patentees describe as their own inventions or to the problems with which they are concerned. They are part of the literature of the art, relevant for

all they contain." *In re Heck*, 699 F.2d 1331, 1332-33, 216 USPQ 1038, 1039 (Fed. Cir. 1983) (quoting *In re Lemelson*, 397 F.2d 1006, 1009, 158 USPQ 275, 277 (CCPA 1968)).

A reference may be relied upon for all that it would have reasonably suggested to one having ordinary skill the art, including nonpreferred embodiments. *Merck & Co. v. Biocraft Laboratories*, 874 F.2d 804, 10 USPQ2d 1843 (Fed. Cir.), cert. denied, 493 U.S. 975 (1989). See also *Celeritas Technologies Ltd. v. Rockwell International Corp.*, 150 F.3d 1354, 1361, 47 USPQ2d 1516, 1522-23 (Fed. Cir. 1998)"

); and

d) mapping the query concept to a concept label that matches the query concept (see disclosure that the system extracts concepts behind user queries and returns those documents that match those concepts, col. 6, lines 34-40; see also col. 20, line 60 through col. 21, line 5).

10. Regarding claim 13, Lin et al. teaches a computer-implemented method of document retrieval as claimed, comprising:

a) performing a pre-processing stage by parsing the documents contained in a collection according to grammar rules in order to identify one or more concepts contained therein (see disclosure that the invention indexes collections of documents with ontology-based predicate structures, col. 6,

lines 34-38; see also disclosure that predicate structures are concepts, col. 8, lines 47-51; see also disclosure of the use of a grammar by the document ontological parser, col. 10, line 62 through col. 11, line 12; see also col. 20, lines 10-12);

b) assigning concept labels to the documents contained in the collection according to the grammar rules (see disclosure that the invention indexes collections of documents with ontology-based predicate structures, col. 6, lines 34-38; see also disclosure that predicate structures are concepts, col. 8, lines 47-51; see also col. 20, lines 10-12);

c) performing a post-processing stage by applying the grammar rules to a query to convert the query to a query concept (see disclosure of the use of a grammar by the query ontological parser, col. 9, line 48 through col. 10, line 7; note that although the reference discloses that the query parser is optimized for parsing user queries [col. 9, lines 52-53] and that the document parser is similarly optimized for the grammatical structure of documents [col. 11, lines 1-2 and 5-8], the characterization of these features as 'optimizations' renders inherent or alternately obvious a non-optimized embodiment that uses the same grammar for both document and query parsing as claimed; see MPEP § 2123:

"The use of patents as references is not limited to what the patentees describe as their own inventions or to the problems with which they are concerned. They are part of the literature of the art, relevant for all they contain." *In re Heck*, 699 F.2d 1331, 1332-33, 216 USPQ 1038, 1039 (Fed. Cir. 1983) (quoting *In re Lemelson*, 397 F.2d 1006, 1009, 158 USPQ 275, 277 (CCPA 1968)).

A reference may be relied upon for all that it would have reasonably suggested to one having ordinary skill the art, including nonpreferred embodiments. *Merck & Co. v. Biocraft Laboratories*, 874 F.2d 804, 10 USPQ2d 1843 (Fed. Cir.), cert. denied, 493 U.S. 975 (1989). See also *Celeritas Technologies Ltd. v. Rockwell International Corp.*, 150 F.3d 1354, 1361, 47 USPQ2d 1516, 1522-23 (Fed. Cir. 1998)"

); and

d) mapping the query concept to a concept label that matches the query concept (see disclosure that the system extracts concepts behind user queries and returns those documents that match those concepts, col. 6, lines 34-40; see also col. 20, line 60 through col. 21, line 5).

11. Regarding claim 17, Lin et al. teaches a computer program residing on a computer-readable medium as claimed, comprising instructions for causing a processor to:

- a) perform a pre-processing stage by parsing the documents contained in a collection with a grammar in order to identify one or more concepts contained therein (see disclosure that the invention indexes collections of documents with ontology-based predicate structures, col. 6, lines 34-38; see also disclosure that predicate structures are concepts, col. 8, lines 47-51; see also disclosure of the use of a grammar by the document ontological parser, col. 10, line 62 through col. 11, line 12; see also col. 20, lines 10-12);
- b) assign concept labels to the documents contained in the collection according to the grammar (see disclosure that the invention indexes collections of documents with ontology-based predicate structures, col. 6, lines 34-38; see also disclosure that predicate structures are concepts, col. 8, lines 47-51; see also col. 20, lines 10-12);
- c) perform a post-processing stage by applying the grammar to a query to convert the query to a query concept (see disclosure of the use of a grammar by the query ontological parser, col. 9, line 48 through col. 10, line 7; note that although the reference discloses that the query parser is optimized for parsing user queries [col. 9, lines 52-53] and that the document parser is similarly optimized for the grammatical structure of documents [col. 11, lines 1-2 and 5-8], the characterization of these features

as 'optimizations' renders inherent or alternately obvious a non-optimized embodiment that uses the same grammar for both document and query parsing as claimed; see MPEP § 2123:

"The use of patents as references is not limited to what the patentees describe as their own inventions or to the problems with which they are concerned. They are part of the literature of the art, relevant for all they contain." *In re Heck*, 699 F.2d 1331, 1332-33, 216 USPQ 1038, 1039 (Fed. Cir. 1983) (quoting *In re Lemelson*, 397 F.2d 1006, 1009, 158 USPQ 275, 277 (CCPA 1968)).

A reference may be relied upon for all that it would have reasonably suggested to one having ordinary skill the art, including nonpreferred embodiments. *Merck & Co. v. Biocraft Laboratories*, 874 F.2d 804, 10 USPQ2d 1843 (Fed. Cir.), cert. denied, 493 U.S. 975 (1989). See also *Celeritas Technologies Ltd. v. Rockwell International Corp.*, 150 F.3d 1354, 1361, 47 USPQ2d 1516, 1522-23 (Fed. Cir. 1998)"

); and

- d) map the query concept to a concept label that matches the query concept (see disclosure that the system extracts concepts behind user queries and returns those documents that match those concepts, col. 6, lines 34-40; see also col. 20, line 60 through col. 21, line 5).

12. Regarding claim 19, Lin et al. teaches a computer program residing on a computer-readable medium as claimed, comprising instructions for causing a processor to:

- a) perform a pre-processing stage by parsing the documents contained in a collection using to grammar rules in order to identify one or more concepts contained therein (see disclosure that the invention indexes collections of documents with ontology-based predicate structures, col. 6, lines 34-38; see also disclosure that predicate structures are concepts, col. 8, lines 47-51; see also disclosure of the use of a grammar by the document ontological parser, col. 10, line 62 through col. 11, line 12; see also col. 20, lines 10-12);
- b) assign concept labels to the documents contained in the collection according to the grammar rules (see disclosure that the invention indexes collections of documents with ontology-based predicate structures, col. 6, lines 34-38; see also disclosure that predicate structures are concepts, col. 8, lines 47-51; see also col. 20, lines 10-12);
- c) receive a query (see disclosure that the system extracts concepts behind user queries and returns those documents that match those concepts, col. 6, lines 34-40; see also col. 20, line 60 through col. 21, line 5);

d) perform a post-processing stage by applying the grammar rules to a query to convert the query to a query concept (see disclosure of the use of a grammar by the query ontological parser, col. 9, line 48 through col. 10, line 7; note that although the reference discloses that the query parser is optimized for parsing user queries [col. 9, lines 52-53] and that the document parser is similarly optimized for the grammatical structure of documents [col. 11, lines 1-2 and 5-8], the characterization of these features as 'optimizations' renders inherent or alternately obvious a non-optimized embodiment that uses the same grammar for both document and query parsing as claimed; see MPEP § 2123:

"The use of patents as references is not limited to what the patentees describe as their own inventions or to the problems with which they are concerned. They are part of the literature of the art, relevant for all they contain." *In re Heck*, 699 F.2d 1331, 1332-33, 216 USPQ 1038, 1039 (Fed. Cir. 1983) (quoting *In re Lemelson*, 397 F.2d 1006, 1009, 158 USPQ 275, 277 (CCPA 1968)).

A reference may be relied upon for all that it would have reasonably suggested to one having ordinary skill the art, including nonpreferred embodiments. *Merck & Co. v. Biocraft Laboratories*, 874 F.2d 804, 10 USPQ2d 1843 (Fed. Cir.), cert. denied, 493 U.S. 975 (1989). See also *Celeritas Technologies Ltd. v. Rockwell International Corp.*, 150 F.3d 1354, 1361, 47 USPQ2d 1516, 1522-23 (Fed. Cir. 1998)"

); and

e) map the query concept to a concept label that matches the query concept (see disclosure that the system extracts concepts behind user queries and returns those documents that match those concepts, col. 6, lines 34-40; see also col. 20, line 60 through col. 21, line 5).

13. Regarding claim 3, **Lin et al.** additionally teaches a method in which the concept label represents a general notion (see disclosure that the invention indexes collections of documents with ontology-based predicate structures, col. 6, lines 34-38; see also disclosure that predicate structures are concepts, col. 8, lines 47-51).

14. Regarding claims 4 and 15, **Lin et al.** additionally teaches a method in which the query is a text query received from a user (see disclosure that the query ontological parser transforms user queries entered in natural language into predicates, col. 9, lines 48-54).

15. Regarding claim 5, **Lin et al.** additionally teaches a method in which the pre-processing stage comprises spidering the collection (see col. 20, lines 31-35), matching features contained in each of the documents to a store of concepts (see col. 20, lines 10-

15), and storing document location indicators for each matched concept (see disclosure of document indexing, col. 20, lines 10-59).

16. Regarding claim 6, **Lin et al.** additionally teaches a method in which the documents are Hypertext Markup Language (HTML) files (see col. 7, lines 37-41; see also col. 20, lines 31-35).

17. Regarding claim 8, **Lin et al.** additionally teaches a method in which the post-processing stage comprises applying a store of grammar rules to the query (see disclosure of the use of a grammar by the query ontological parser, col. 9, line 48 through col. 10, line 7).

18. Regarding claim 9, **Lin et al.** additionally teaches a method in which the grammar rules map text to concepts (see disclosure of the use of a grammar by the query ontological parser, col. 9, line 48 through col. 10, line 7; see also disclosure that the system transforms user queries entered in natural language into predicates, col. 9, lines 48-52; see also disclosure that predicate structures are concepts, col. 8, lines 47-51).

19. Regarding claims 10, 16, 18 and 20, **Lin et al.** additionally teaches a method further comprising generating and displaying a list of the mapping (see col. 18, line 66 through col. 19, line 35).

20. Regarding claim 14, **Lin et al.** additionally teaches a method in which the pre-processing stage comprises parsing documents automatically with the grammar rules (see disclosure that the invention indexes collections of documents with ontology-based predicate structures, col. 6, lines 34-38; see also disclosure that predicate structures are concepts, col. 8, lines 47-51; see also disclosure of the use of a grammar by the document ontological parser, col. 10, line 62 through col. 11, line 12; see also col. 20, lines 10-12; see also disclosure that document indexing is fully automated, col. 20, lines 52-56).

21. Claims 7, 11 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over **Lin et al.** (U.S. Patent 6,675,159) as applied to claims 1, 3-6, 8-10 and 13-20 above, and further in view of **Braden-Harder et al.** (U.S. Patent 5,933,822).

22. Regarding claim 7, **Lin et al.** teaches a method substantially as claimed.

Lin et al. does not explicitly teach a method wherein the document location indicators are Universal Resource Identifiers.

Braden-Harder et al., however, teaches a method wherein the document location indicators are Universal Resource Identifiers (see disclosure that the document records typically include the URL associated with the document, col. 1, line 66 through col. 2, line 5).

It would have been obvious to one of ordinary skill in the art at the time of the invention to record a mapping of document features to concepts and document locations (URLs), since the Internet comprises a source of valuable information that is larger than any single conventional database (see col. 1, lines 36-48) and using this technique would significantly ease the task of retrieving information from the Internet (see col. 1, lines 49-52).

23. Regarding claim 11, **Lin et al.** teaches a method substantially as claimed.

Lin et al. does not explicitly teach a method wherein the list of documents represents locations of documents.

Braden-Harder et al., however, teaches a method wherein the list of documents represents locations of documents (see disclosure that the document records typically include the URL associated with the document, col. 1, line 66 through col. 2, line 5).

It would have been obvious to one of ordinary skill in the art at the time of the invention to maintain the location of documents, since the Internet comprises a source of valuable information that is larger than any single conventional database (see col. 1, lines 36-48), and retrieval of information from the Internet requires the maintenance of location information.

24. Regarding claim 12, **Braden-Harder et al.** additionally teaches a method wherein the locations are Universal Resource Identifiers (see disclosure that the document records typically include the URL associated with the document, col. 1, line 66 through col. 2, line 5).

Response to Arguments

25. Applicant's arguments filed 7 November 2006 have been fully considered but they are not persuasive.

26. Regarding the Applicants' argument that the **Lin et al.** reference fails to disclose the assignment of concept labels to documents in a collection based on identified concepts, the examiner respectfully disagrees.

The **Lin et al.** reference clearly discloses at col. 6, lines 32-40 that the system indexes documents with ontology-based predicate structures, and at col. 8, lines 43-55, that the predicate structures are concepts.

"A predicate structure is a data type that includes a predicate and multiple additional concepts; as a grouping of concepts, it is itself a concept." (emphasis added)

Thus, the reference teaches a system that indexes documents with concepts, anticipating the claimed labeling documents with concept labels (which, according to the Applicants' specification, are 'general notions').

The reference further discloses the processing of queries in the same way as the documents, so that concepts in the query can be matched to documents having the same concepts, at col. 9, line 48 through col. 10, line 7.

The rejection of record is maintained by the examiner.

Conclusion

27. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Luke S. Wassum whose telephone number is 571-272-4119. The examiner can normally be reached on Monday-Friday 8:30-5:30, alternate Fridays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John R. Cottingham can be reached on 571-272-7079. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

In addition, INFORMAL or DRAFT communications may be faxed directly to the examiner at 571-273-4119. Such communications must be clearly marked as INFORMAL, DRAFT or UNOFFICIAL.

Customer Service for Tech Center 2100 can be reached during regular business hours at (571) 272-2100, or fax (571) 273-2100.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
